**FYI** Help prevent the spread of colds and flu by spraying a germ-killing disinfectant regularly on commonly touched surfaces such as telephones, keyboards and door handles.

Disinfectants destroy the growth of microorganisms. Disinfectants are often effective against the full spectrum of germs, including bacteria, viruses and fungi.

According to the Environmental Protection Agency (EPA), "disinfection" is killing more than 99.99% of germs on hard, nonporous surfaces in 10 minutes and may pertain to a number of different types of bacteria, viruses and fungi. The EPA defines "sanitization" as killing 99.99% of bacteria in 5 minutes or less.
